Commissioner of Patents and Trademarks

# Office Action Summary

Application No.  
09/454,740

Applicant(s)  
Hillebrand et al.

Examiner  
Arun Chakrabarti

Group Art Unit  
1655

☒ Responsive to communication(s) filed on Nov 17, 2000

☒ This action is **FINAL**.

☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

A shortened statutory period for response to this action is set to expire 3 month(s), or thirty days, whichever is longer, from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned. (35 U.S.C. § 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(a).

## Disposition of Claims

☒ Claim(s) 1-11 and 26-29 is/are pending in the application.

Of the above, claim(s) \_\_\_\_\_ is/are withdrawn from consideration.

☐ Claim(s) \_\_\_\_\_ is/are allowed.

☒ Claim(s) 1-11 and 26-29 is/are rejected.

☐ Claim(s) \_\_\_\_\_ is/are objected to.

☐ Claims \_\_\_\_\_ are subject to restriction or election requirement.

## Application Papers

☐ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

☐ The drawing(s) filed on \_\_\_\_\_ is/are objected to by the Examiner.

☐ The proposed drawing correction, filed on \_\_\_\_\_ is ☐ approved ☐ disapproved.

☐ The specification is objected to by the Examiner.

☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. § 119

☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

☐ All ☐ Some\* ☐ None of the CERTIFIED copies of the priority documents have been  
☐ received.

☐ received in Application No. (Series Code/Serial Number) \_\_\_\_\_.

☐ received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

\*Certified copies not received: \_\_\_\_\_

☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

## Attachment(s)

☒ Notice of References Cited, PTO-892

☐ Information Disclosure Statement(s), PTO-1449, Paper No(s). \_\_\_\_\_

☐ Interview Summary, PTO-413

☐ Notice of Draftsperson's Patent Drawing Review, PTO-948

☐ Notice of Informal Patent Application, PTO-152

--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

Art Unit: 1655

## DETAILED ACTION

### *Specification*

1. Claims 1-11 have been amended and new claims 28-29 have been added.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-5, 7, 9 and 28-29 are rejected under 35 U.S.C. 103(a) over Anderson et al. (U.S. Patent 5,948,656) (September 7, 1999) in view of Cleuziat et al. (U.S. Patent 5,824,517)

Art Unit: 1655

(October 20, 1998) further in view of Nochumson et al. (U.S. Patent 5,552,325) (September 3, 1996).

Anderson et al. teach formulations without chaotropic components for isolating nucleic acids (Example I), in particular of DNA, from optional complex starting materials containing:

- a lysis/binding buffer system which contains at least one antichaotropic salt component (Example I, column 15, lines 23-24),
- wash and elution buffers (Example I, column 15, lines 27-32).

Anderson et al. teach the formulations wherein the antichaotropic component is sodium chloride (Example I, column 15, lines 23-24).

Anderson et al. teach the formulations wherein the lysis/binding buffer system contain detergents and additive (Example I, column 15, line 24).

Anderson et al. teach the formulations wherein the detergents are Tris-HCl, EDTA, SDS and triton X-100 (Example I, column 15, lines 24-25).

Anderson et al. teach the formulations wherein the lysis/binding buffer system contains an alcohol (Example I, column 15, lines 25-26).

Anderson et al do not teach the binding of nucleic acid to a substrate.

Cleuziat et al. teach the binding of nucleic acid to a substrate (Column 5, line 49 to column 6, line 24).

Art Unit: 1655

Anderson et al do not teach the complex starting material chosen from the group consisting of compact plant materials, whole blood, tissue, foodstuffs and other sources suspected of containing biological organisms.

Cleuziat et al. teach the complex starting material chosen from the group consisting of compact plant materials, whole blood, tissue, foodstuffs and other sources suspected of containing biological organisms (Column 8, lines 47-54).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to combine and substitute the solid substrate of Cleuziat et al. in the lysing buffer of Anderson et al., since Cleuziat et al. state, "The term solid substrate as used here includes all materials on which a nucleic acid fragment can be immobilized for utilization in diagnostic tests, in affinity chromatography, and in separation processes (Column 5, lines 49-52)". An ordinary practitioner would have been motivated to combine and substitute the solid substrate of Cleuziat et al. in the lysing buffer of Anderson et al. in order to achieve the express advantage of a system, as noted by Cleuziat et al, on which a nucleic acid fragment can be immobilized for utilization in diagnostic tests, in affinity chromatography, and in separation processes.

Anderson et al in view of Cleuziat et al do not teach a wash buffer comprising at least 50% ethanol, and a low elution buffer.

Nochumson et al teach a wash buffer comprising at least 50% ethanol, and a low salt elution buffer.(Column 12, lines 34-58 and Examples 1 and 3, Column 13 and 14 respectively).

Art Unit: 1655

Anderson et al in view of Cleuziat et al do not teach the elution buffer comprising Tris-Hcl, TE, and water.

Nochumson et al teach the elution buffer comprising Tris-Hcl, TE, and water (Column 12, lines 34-58).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to combine and substitute the wash and elution buffer of Nochumson et al. in the nucleic acid isolating system of Anderson et al in view of Cleuziat et al since Nochumson et al. state, "It is important to maintain a high enough ionic strength to avoid washing off bound DNA (Column 12, lines 39-41)". An ordinary practitioner would have been motivated to combine and substitute the wash and elution buffer of Nochumson et al. in the nucleic acid isolating system of Anderson et al in view of Cleuziat et al. in order to achieve the express advantage of a buffer system, as noted by Nochumson et al, which avoid washing off bound DNA by the wash buffer and enhances elution at a low ionic strength.

4. Claims 1-7, 9 and 27-29 are rejected under 35 U.S.C. 103 (a) over Anderson et al. (U.S. Patent 5,948,656) (September 7, 1999) in view of Cleuziat et al. (U.S. Patent 5,824,517) (October 20, 1998) further in view of Nochumson et al. (U.S. Patent 5,552,325) (September 3, 1996) further in view of Gonsalves et al. (U.S. Patent 5,907,085) (May 25, 1999).

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. teach the formulations of claims 1-5, 7, 9 and 28-29 as described above.

Art Unit: 1655

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. do not teach the lysis/binding buffer system containing enzymes in aqueous solution.

Gonsalves et al teach the lysis/binding buffer system containing enzymes in aqueous solution (Example I, column 35, lines 34-36 and Example 12, column 43, lines 43-49).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute proteinase K of Gonsalves et al. in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al., since Gonsalves et al. states, "Samples prepared with proteinase K-treated crude extract have an advantage over others in that hazardous organic solvents, such as phenol and chloroform, are avoided (Column 43, lines 46-49)". An ordinary practitioner would have been motivated to substitute the proteinase K of Gonsalves et al. in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al., in order to achieve the express advantage of a system, as noted by Gonsalves et al, which has advantage over others in that hazardous organic solvents, such as phenol and chloroform, are avoided.

5. Claims 1-5 and 7-9 and 28-29 are rejected under 35 U.S.C. 103 (a) over Anderson et al. (U.S. Patent 5,948,656) (September 7, 1999) in view of Cleuziat et al. (U.S. Patent 5,824,517) (October 20, 1998) further in view of Nochumson et al. (U.S. Patent 5,552,325) (September 3, 1996) further in view of Summerton et al. (U.S. Patent 6,060,246) (May 9, 2000).

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. teach the formulations of claims 1-5, 7, 9 and 28-29 as described above

Art Unit: 1655

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. do not teach the formulations wherein the buffer system is a solid formulation stable in storage in reaction vessel ready for use.

Summerton et al teach the formulations wherein the buffer system is a solid formulation stable in storage in reaction vessel ready for use (Column 10, lines 52-57).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute dried buffer of Summerton et al in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. since Summerton et al. state, "This pH adjustment can be readily carried out as part of the specimen preparation step, simply by incorporating in the specimen receiving container a suitable buffer, preferably in dry form, effective to adjust the specimen to the proper pH for electrostatic capture of polynucleotides (Column 10, lines 52-57)". An ordinary practitioner would have been motivated to substitute dried buffer of Summerton et al. in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al., in order to achieve the express advantage of a system, as noted by Summerton et al, which provides effective adjustment of the specimen to the proper pH for electrostatic capture of polynucleotides

6. Claims 1-5, 7, and 9-11 and 28-29 are rejected under 35 U.S.C. 103 (a) over Anderson et al. (U.S. Patent 5,948,656) (September 7, 1999) in view of Cleuziat et al. (U.S. Patent 5,824,517)

Art Unit: 1655

(October 20, 1998) further in view of Nochumson et al. (U.S. Patent 5,552,325) (September 3, 1996) further in view of Woodard et al. (U.S. Patent 5,650,506) (July 12, 1997).

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. teach the formulations of claims 1-5, 7, 9 and 28-29 as described above

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. do not teach the formulations wherein all carriers which have a negatively functionalised surface or functionalised surfaces which may be converted to a negative charge potential serve as solid phase and wherein the surface of the carrier is modified by a hydroxyl group.

Woodard et al teach the formulations wherein all carriers which have a negatively functionalised surface or functionalised surfaces which may be converted to a negative charge potential serve as solid phase and wherein the surface of the carrier is modified by a hydroxyl group (Abstract and Column 2, lines 40-57 and column 4, lines 44-54).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute the negatively charged surface containing solid phase of Woodard et al. in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al., since Woodard et al. state, "The modified glass fiber membranes of the present invention allows very quick and efficient isolation of DNA from biological samples. They can substantially decrease the time required to process pure DNA from biological samples, compared with currently used techniques, and in some cases generate high quantities of pure DNA (Column 4, lines 44-49)". An ordinary practitioner would have been

Art Unit: 1655

motivated to substitute the negatively charged surface containing solid phase of Woodard et al. in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al., in order to achieve the express advantage of a system, as noted by Woodard et al, which allows very quick and efficient isolation of DNA from biological samples and in some cases generate high quantities of pure DNA .

7. Claims 1-5, 7, 9 and 26, and 28-29 are rejected under 35 U.S.C. 103 (a) over Anderson et al. (U.S. Patent 5,948,656) (September 7, 1999) in view of Cleuziat et al. (U.S. Patent 5,824,517) (October 20, 1998) further in view of Nochumson et al. (U.S. Patent 5,552,325) (September 3, 1996) further in view of Asgari et al. (U.S. Patent 5,858,649) (January 12, 1999).

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. teach the formulations of claims 1-5, 7, 9 and 28-29 as described above.

Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. do not teach the antichaotropic component ammonium chloride.

Asgari et al teach the antichaotropic component ammonium chloride (Column 9, lines 47-50).

It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to substitute and combine ammonium chloride as a lysing reagent of Asgari et al. in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al., since Asgari et al. state, "A preliminary step involving lysis of maternal erythrocytes involving, e.g., with ammonium chloride, can conveniently be used to

Art Unit: 1655

remove a substantial proportion of these red cells (Column 9, lines 47-50)". An ordinary practitioner would have been motivated to substitute the ammonium chloride of Asgari et al. in the nucleic acid isolation method of Anderson et al. in view of Cleuziat et al. further in view of Nochumson et al. in order to achieve the express advantage of a system, as noted by Asgari et al, which can conveniently be used to remove a substantial proportion of red cells from erythrocytes to selectively purify white blood cells.

***Response to Amendment***

8. In response to the amendment, all 112 (second paragraph) rejections are withdrawn.

***Response to Arguments***

9. Applicant's arguments with respect to all pending claims have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 1655

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun Chakrabarti, Ph.D., whose telephone number is (703) 306-5818. The examiner can normally be reached on 7:00 AM-4:30 PM from Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax phone number for this Group is (703) 305-7401.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0196.
